

**7** **Critical Energy Strategy:**  
The most recent economic downturn is a peak oil recession

**WorldView**

**12** **Executive Interview:**  
Black Marlin Energy's Jeff Hume

**Book Review**

**Energy policy overwhelms China** 24  
*Energy demand within China has defined the country's goals, but the domestic energy policy has failed to keep pace with China's evolution.*

**Electromagnetics**

**Electromagnetics takes on deepwater risk** 33  
*Integrating seismic with non-seismic techniques has proven to lower exploration risk, particularly in deepwater frontiers where challenges, logistics, and costs can be formidable.*

**Unlocking the value of CSEM** 39  
*EM data are at their most useful when integrated with other data types.*

**3-D EM addresses exploration challenges** 43  
*Technique helps reduce risk in GoM projects.*

**Multizone Completions**

**Innovations improve reliability of frac sleeve completions** 46  
*A systematic approach to design, manufacturing and operations creates new reasons to deploy frac sleeve completions in multizone horizontal wells.*

**New swellable packer technology speeds completions in multizone wells** 48  
*Higher pressure ratings and shorter packer lengths add value to customized frac completions.*

**Production Optimization**

**Sine of the future** 51  
*New technology variable speed drives extend electrical submersible pump life while cutting operational costs.*

**And the list goes on** 55  
*Expandable technology helps operators get more out of their wells at a time when higher productivity is number one on the priority list.*

**When is a hole more than a hole?** 59  
*Many operators, especially those drilling in the shale gas plays, are finding out that there's a big difference between perforating for production and perforating for stimulation.*

**Middle East Operations**

**The Middle East remains a heavyweight in the upstream arena** 62  
*Though exploration activity has fallen off, a number of countries in the region are opening licensing rounds to encourage more outside investors. Sizable new discoveries indicate the region is still very prospective.*

**Fluid design solves shale instability problem** 66  
*Integrating geomechanics with drilling fluid design successfully mitigates time-dependent wellbore instability in Middle East fields.*

**Subsea Advances**

**Multiphase twin-screw boosting technology improves production** 69  
*System flexibility extends the limits of successful subsea boosting.*

**CCS**

**Monitoring technology enables long-term CO<sub>2</sub> geosequestration** 72  
*Tried-and-true methods can be used in a new way.*

**Turning lemons into lemonade: Achieving benefits from CCS** 74  
*Carbon capture and storage has multiple benefits — but a wary public.*

**24**
